Program
FOR** **LGU**
ACADEMY

LGU Academy is a non-profit organisation which offer classes for children and young people from 6 to 30 years. This academy offers a wide range of activities such as Dance, Music, Media and Sports. It has reached more than a thousand young people in Antwerp, urban youth that are a reflection of our society in ethnicity, culture, religion and socio-economic background.

During the last year LGU has gained more than 500 new students. With the income of these new students, the amount of data received has become a problem. As a result of this, I have been asked to provide them with an administrative program that stores and handles data such as interviews, lessons, attendancies, etc.

Due to the fact that their data was stored in a database, it made it easier to visualize it and put it into statistics. This will give them a more structured view upon their organisation. Which will also make it a lot easier for them to find investors.
